mm	mm	kg	Sheet
Thickness	Sheet size	Weight per m²	Per pallet

- Economical
- Lightens the building
- Acoustic and thermal insulation
- Quick, easy installation
- Takes paint easily

A gypsum core with strong paper on the face and long edges. The main product of dry construction: partition and lining walls, suspended and decorative ceilings. AK edges give a perfectly flat surface when jointed with filler and tape.

Grade A · AK edge | **Each pallet ≈ 345.6 m²** | **Each sheet ≈ 18 kg**

Use: Suspended ceilings, wall lining, decorative designs

Note The lightest sheet in the family; suits ceilings and sculpted work where weight and cost matter. A 120-sheet pallet means more load per shipment.
