Fast machine application

Nab Gypsum (Siva)

NAAB GYPSUM · SIVA

Lightweight, modern gypsum applied directly on brick, block and silicate block

Initial set	Final set	Whiteness	Application speed
100 min	180–200 min	95%+	150–200 m² per day

Product overview

This is one of the modern lightweight products in the building industry. Nab Gypsum (Siva) can be applied directly on different surfaces – brick, clay or cement block and silicate block – with no base coat or gypsum bonding layer. For fast, easy application an aluminium profile is fixed to the wall and the gap between wall and profile face is filled with gypsum.

Applications

- Spray and hand plastering of buildings

Technical features

- Initial set about 100 minutes, final set 180–200 minutes; plenty of time for finishing
- Low moisture absorption
- Faster than the traditional method (150–200 m² per day)
- High strength, hardness and adhesion; low waste
- Whiteness above 95% and purity above 96%
- Can be applied with a gypsum spraying machine or by hand

Packaging

30 kg laminated polypropylene bags

Practical tip

For 1 cm of thickness about 8 kg per m² is used. Application speeds of 150 to 200 m² per day have been reported.
